

Tori Bryan

PRODUCT DESIGNER | DESIGN SYSTEMS | FRONT-END

Phoenix, AZ (open to relocation, NYC / SF) | (480) 323-6343 | toribryan.design@gmail.com
toribryan.com | linkedin.com/in/victorialbryan

Five years in B2B and B2C product design, most recently Staff at an enterprise EdTech company, where I led design on three products and owned the multi-brand design system. I design data-dense enterprise interfaces, build the tooling that lets a design team work with AI agents, and ship production front end alongside engineering.

EXPERIENCE

Proctorio | Staff Product Designer | Scottsdale, AZ

Sep 2025 – Aug 2026

Led design across 3 products and 8 surfaces, and owned the multi-brand design system, its governance, and the standards the design team and engineering org build from. Promoted to Staff 90 days after rejoining.

- Led a legacy design system overhaul with two engineers: 37 components, MVP in 60 days. Button variants dropped 59%, from 1,160 to 480, and card variants dropped 94%, from 587 to 32. Rebuilt the tokens on a semantic hierarchy, and took contrast from roughly 40% of button variants failing WCAG to a 100% AAA pass. The v2 Card took 1.5 days to build against 2 weeks for v1.
- Rebuilt design-to-engineering handoff around working prototypes and Claude Code. Spec production and review went from 3 days to 2 weeks, down to under 30 minutes, with 100% team adoption and roughly 80 hours per cycle returned to design work.
- Took AuthorProof, an AI authorship-verification tool, from an assigned brief to a production-ready MVP in 4 to 6 weeks. Audited the intended architecture before build, found four constraints that broke the core promise, and pitched a smaller embedded flow that cut the wait before a quiz from about ten minutes to seconds.
- Designed the operational screens where dense exam and staffing data has to be read fast: Proctor Coverage Analytics, a Support Agent Dashboard for live in-exam support, and the admin scanning tools.
- Shipped features for a customer-facing review product used by instructors, administrators, and proctoring agents, each opening the same session recording for a different reason.
- Made the case for putting usability testing back in the process, then ran it. The Exam Precheck study was in person, 6 participants across 3 demographics. Its findings made transparency a core design principle, and the 30+ customer beta reported majority high satisfaction on every targeted area.
- Aligned the Figma design system library to the codebase 1:1 so an LLM could read it, and defined the design layer of an agentic pipeline that takes a PRD to production-ready code.

Tori Bryan Design Services | Product Designer and Design Engineer | Self-employed

Feb 2023 – Present

Independent practice, full time since Aug 2026. I partner with engineering teams on design systems, product design, and the production front-end code that ships them.

- Defined the design system for Modern Care Homes, a senior living search and discovery marketplace, and designed the family-facing search (multi-criteria filtering, listings, profiles) and the agent platform.
- Redesigned Iron Diamond Media's editorial website and vendor platform with their engineers, so 7 sister brands share one themed design system. Wrote the front-end styling and markup myself.
- Contribute production code to the SLV Technologies codebase through GitHub PR review, deployed to production: Next.js, React, Tailwind, Shadcn, Base UI, Astro, and Storybook.
- Contracted with Proctorio as a design system contributor and product designer: designed and documented 12+ components, and designed internal tools and dashboards.

Proctorio | Multimedia Designer | Scottsdale, AZ

Jun 2021 – Aug 2023

- Led a full rebrand across product and marketing, grounded in personas, market strategy, and user research, and built a first design system from scratch before moving into UI/UX on the product design system and internal dashboards.

SKILLS

Product design: End-to-end product design (0-to-1 and scale), B2B and B2C, SaaS and enterprise, data-dense interface design, complex operational workflows, information architecture, prototyping

Design systems: Ownership and governance, semantic token architecture, design-to-code alignment, multi-brand theming, WCAG accessibility

Front end: React, Next.js, JS/JSX, HTML, CSS, Tailwind, Shadcn, Base UI, Astro, Storybook, Git and GitHub, WebStorm

Research: User interviews, in-person usability testing, research methodology (IRB certified), success-metric definition, PostHog

AI and tooling: Claude Code skill authorship, hooks and automation, MCP, Code Connect, LLM-legible design systems, spec authorship, Cursor

Design tools: Figma, FigJam, Framer, Notion, Adobe Creative Suite
