

Tori Bryan

Product Designer, Design Systems and Design Engineering

Phoenix, AZ | toribryan.design@gmail.com | toribryan.com | linkedin.com/in/victorialbryan | github.com/toribryan

Summary

Product designer specializing in design systems, who ships the front end they design. Five years building B2B products, component libraries, and the tooling that connects design to production code, most recently owning the multi-brand design system for a proctoring platform used by 8 million test takers.

Experience

Tori Bryan Design Services · Phoenix, AZ (Remote)

Design Engineer

Aug 2026 - Present

- Design systems, product design, and the production front end that ships them, mainly through SLV Technologies for their clients.
- Contribute production code to the SLV Technologies codebase through GitHub pull request review in Next.js, React, Tailwind CSS, shadcn/ui, Base UI, Astro, and Storybook.
- Built and ship toribryan.com as a live Next.js codebase, and [fibo](#), an open-source design system on shadcn/ui and Base UI published as an installable shadcn registry.

Product Designer (Contract)

Feb 2023 - Jul 2026

- **Proctorio**: designed the Review Center video player and action bar, internal tools and dashboards, and 12+ documented design system components. Redesigned the multi-audience help center with role-based content visibility and an internal CMS.
- **Modern Care Homes**: defined the design system for the agent platform and designed a new family-facing senior living search end to end: multi-criteria filtering, listings, and profiles.
- **Iron Diamond Media**: built one themed design system shared by seven publications, starting with Arizona Bride, and shipped its front-end styling and markup.
- **Hydra Endura, Mincredo**: brand identities including logo, brand guidelines, core UI components, and social strategy.

Proctorio · Scottsdale, AZ

Staff Product Designer

Sep 2025 - Aug 2026

- Owned the multi-brand design system, its governance, and the technical design standards design and engineering build from, while leading design across three products and eight surfaces.
- Led a legacy design system overhaul with two engineers: 37 components with an MVP in 60 days, button variants down 59% and card variants down 94%, and button contrast from roughly 40% failing WCAG to a 100% AAA pass.
- Rebuilt design-to-engineering handoff around agentic tooling and prototype-forward delivery, cutting spec production from 3 days–2 weeks to under 30 minutes and returning roughly 80 hours per cycle, with 100% team adoption.
- Authored the shared Claude Code skill framework behind it, with hooks that cascade prototype changes into specs and release notes.
- Shipped WebSweep as the first product on the overhauled system, and took AuthorProof from an assigned brief to a production-ready MVP in 4 to 6 weeks after testing the proposed solution against research.
- Designed data-dense operational screens, including Proctor Coverage Analytics and the Support Agent Dashboard.
- Reintroduced usability testing: ran the in-person Exam Precheck study with six participants, and a 30+ customer beta reported majority high satisfaction on every targeted area.
- Coached designers on the system, reviewed work against its standards, and mentored junior designers and interns.

Product Designer

Jun 2025 - Sep 2025

- Rehired after two years of contracting and promoted to Staff 90 days later; shipped two product surfaces and wrote the 60-day strategy that became the design system overhaul.

Multimedia Designer

2022 - Aug 2023

- Led the full Proctorio rebrand (logo, color, visual language, and asset library), grounded in personas, user research, and EdTech competitive analysis.
- Built the first design system from scratch, then moved into product UI, guide sites for test takers and institutions, and internal tools.

Multimedia Design Intern

Jun 2021 - 2022

- First full-time design intern, helping start the design internship program; designed landing pages, conference collateral, and the digital brand template system.

Skills

Design: Design systems, design system governance, token architecture, product design, data-dense interfaces, prototyping, accessibility (WCAG), brand design

Research: Usability testing, user research, competitive analysis, UserTesting, PostHog

Engineering: React, Next.js, Tailwind CSS, shadcn/ui, Base UI, Storybook, HTML, CSS, Git, GitHub

Tools: Figma, Claude Code, Cursor, Framer, Webflow, Adobe Creative Suite, Azure DevOps, Notion

Education

Arizona State University, Bachelor of Arts, Digital Communication and Media/Multimedia

2019 - 2023

Certifications

IRB, Social and Behavioral Research, CITI Program

2023

Search Engine Optimization, Stukent

2022
